

Opportunity for teaching staff to gain essential professional updating through Balfour Beatty's professional network

Leading international infrastructure group, Balfour Beatty, has developed its own internal CPD programme to ensure their own teams are at the forefront of technical know-how, and for the past 2 years has been broadcasting weekly webinars delivered by industry experts on a range of topics including:-

- **Modern Methods of Construction**
- **Environment and Sustainability**
- **New Energy**
- **Roadworks**
- **Tunnelling**
- **Foundations and Retaining Structures**

In the upcoming months we've got exciting topics lined up including: Surveying, Buildings, and Power, as well as a slightly new topic for us of Ability and Neurodiversity and how we maximise inclusivity on site.

As a commitment to working and supporting their education partners, Balfour Beatty will now provide free unlimited access to these live webinars. To launch the pilot, Balfour Beatty are extending the invite the live webinars now by simply registering your interest via this link [Register for The Knowledge Series](#)

Additionally, Balfour Beatty is currently developing a dedicated educational portal which will then host all these broadcasts so enabling partners to watch on-demand and to use within the delivery of the curriculum. It is anticipated the new portal will be ready for launch for the 23/24 Academic Year and will be extended to allow students to also access.

This project originated from the Skills for Job White paper and the DfE's FEPDG pilot project and is aimed at Engineering, Construction Built Environment, Civil Engineering, Design and Surveying teaching staff.

Balfour Beatty would like to develop active and productive links with the FE and HE sectors. This opportunity forms part of their ambition to drive the transformation of industry to meet the challenges of the future including net zero, zero waste and diverse recruitment. Involvement in the project will lead to further opportunities that Balfour Beatty has for the development of formal partnerships with key institutions so early engagement is recommended.
